Art Unit: 3653

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Page 2

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 4 through 6, 8, 12, 14 through 16 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Lawson.
  - See Figures 14 and 15 which clearly show the closure means a distance of 2mm or more beyond the periphery of the dispensing opening. Further, the closure means is re-closable after the first dispensing (see column 7 lines 43-49).
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number: 10/786,648 Page 3

Art Unit: 3653

5. Claims 3 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lawson.

Lawson as interpreted above in paragraph 2 teaches everything except the area dimension of the dispensing orifice.

The area dimension of the dispensing orifice is considered an obvious matter of choice for one of ordinary skill in the art as it is well within the ability of one skilled in the art to properly size such an orifice to properly retain the paper handkerchiefs in the pack while allowing removal when desired.

6. Claims 7 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lawson in view of Reinheimer (DE 3324490) cited by applicant.

Lawson as interpreted above in paragraph 2 teaches everything except the closure means comprises a resealable tape having a grip end formed by partially folding the tape on itself.

Reimheimer teaches a closure means 10 for the dispensing opening of a container secured by a resealable tape20 having a gripping end formed by folding the end of the tape on itself (see Figs. 1 and 2).

In view of the teachings of Reimheimer, it would have been obvious to one of ordinary skill in the art to employ a resealable tape to secure the closure means of Lawson rather than the disclosed Velcro. This is considered the substitution of one known closure securing means for another.

7. Claims 9, 10, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lawson in view of Nakamura.

Art Unit: 3653

Lawson as interpreted above in paragraph 2 teaches everything except the closure means comprising a separate element joined on an external surface of the pack.

Nakamura teaches providing a closure means 4 for the dispensing orifice of pack for sheet material which is separately attached (joined) at 3 to an external surface of the pack.

It would have been obvious to one of ordinary skill in the art to provide a closure means as a separate element joined to an external surface of the pack of Lawson. This is considered the substitution of one known closure means for another.

- 8. Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 9. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the closure means joined with the pack on an internal surface as recited in claim 11 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure

is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David H Bollinger whose telephone number is 703-308-1113. The examiner can normally be reached on Monday through Friday from 9:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Donald Walsh, can be reached on 703-306-4173. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
